## Summary

Cloud & DevOps Engineer with 1 year and 10 months of experience across AWS, Azure, and GCP, focused on infrastructure automation and CI/CD. Provisions infrastructure as code with Terraform, builds GitHub Actions and Azure DevOps pipelines, and administers Linux servers with Prometheus/Grafana and CloudWatch monitoring. Hands-on with Docker, Kubernetes, Helm, and ArgoCD (GitOps) through project work. Delivered 25% cloud cost optimization, 40% faster provisioning, and 70%+ less manual operations effort.

## Skills

**CI/CD:** GitHub Actions | GitLab CI/CD | Jenkins | Azure DevOps | AWS CodePipeline, CodeBuild, CodeDeploy | Git
**Infrastructure as Code (IaC):** Terraform (reusable modules) | CloudFormation | AWS CDK | Ansible (Configuration Management)
**Containers & Orchestration:** Docker | Kubernetes | Helm | GitOps (ArgoCD) | Amazon EKS | Amazon ECS | GKE
**Cloud Platforms:** AWS (EC2, IAM, VPC, S3, ALB, ASG, RDS, Route 53, Lambda, CloudFront, Secrets Manager) | Azure (AVD, Virtual Machines, Entra ID, Key Vault, RBAC) | GCP (Compute Engine, Cloud Monitoring)
**Observability & Monitoring:** Prometheus | Grafana | CloudWatch | Azure Monitor (KQL, Log Analytics) | Logging | Alerting
**Linux & Networking:** Linux Administration | SSH | DNS | TLS/SSL | VPC/VNet Networking | Load Balancing | Firewall Rules (NSG)
**Scripting & Databases:** Python (boto3) | Bash/Shell Scripting | PowerShell | Java | SQL | PostgreSQL | MongoDB | DynamoDB
**Practices:** Agile/Scrum | Incident Response | Root Cause Analysis (RCA) | Backup & Restore | Cost Optimization
**AI Tools & Frameworks:** GitHub Copilot | Claude Code | LangChain | CrewAI | RAG Pipelines

## Experience

**Cloud Operations Engineer** | Parkar Global Technologies Pvt Ltd — Dec 2024 – Present

AWS Environment Design, Setup & Configuration

- Architected and deployed a fault-tolerant WordPress deployment on AWS with 99.9% uptime using a multi-AZ architecture.
- Provisioned infrastructure using EC2, Auto Scaling Groups (ASG), Application Load Balancer (ALB), Amazon RDS, Lambda, Amazon S3, and CloudFront.
- Provisioned AWS infrastructure as code with Terraform plan and apply. Reducing environment setup time to under 30 minutes.
- Enabled one-click infrastructure replication for fast, consistent, and repeatable deployments.
- Designed Grafana dashboards and alert rules on an existing Prometheus stack, and CloudWatch alarms and dashboards on AWS.
- Built an end-to-end CI/CD pipeline using Terraform, Ansible, and GitHub Actions, reducing feature delivery timelines by over 50%.

Azure Virtual Desktop (AVD) Management & Optimization

- Designed and automated Azure Virtual Desktop (AVD) environments using PowerShell for declarative infrastructure provisioning and Azure VM Image Builder (AIB) for automated golden-image pipelines, accelerating multi-client deployments by 40% (~8 to ~5 hrs).
- Developed Azure DevOps pipelines running Terraform and PowerShell with automated Active Directory domain join and Azure Key Vault secret management, eliminating over 70% of manual effort and reducing configuration errors to near zero across 5 clients.
- Configured FSLogix user profiles and AVD autoscaling for client host pools, and drove a 25% reduction in monthly cloud spend through right-sizing and auto-scaling while supporting 450+ concurrent VDI users.
- Administered Linux servers: user/SSH access and permissions, OS patching, web/app server setup, and service troubleshooting.
- Implemented proactive observability for VDI infrastructure using Azure Monitor and Log Analytics (KQL), reducing mean time to resolution (MTTR) for enterprise support incidents.

## Projects

**DevSecOps CI/CD Pipeline -** Jenkins, SonarQube, Trivy, OWASP, Docker, Kubernetes, Maven, GitHub Webhooks

- Architected an end-to-end DevSecOps CI/CD pipeline integrating Jenkins with SonarQube (static code analysis), OWASP Dependency-Check (SCA), and Trivy (container image scanning) to embed automated security gates across the build and deployment stages, deploying a 3-tier Java application to a self-managed Kubernetes cluster.
- Set up GitHub webhooks to auto-trigger the pipeline on every code push for a fully automated build-scan-deploy workflow.

**AI-Powered HR Policy Chatbot (RAG) -** Python, FastAPI, Llama, LangChain, FAISS

- Built an AI-powered HR Policy Chatbot at Parkar Digital using a Retrieval-Augmented Generation (RAG) architecture.
- Implemented semantic document retrieval with FAISS and Llama LLM inference to enable context-aware HR policy question answering.
- Cut HR policy query resolution time by ~60% with a RAG chatbot (FAISS retrieval + Llama inference) replacing manual lookups.

## Education

**B.E., Computer Science & Engineering** | The Maharaja Sayajirao University of Baroda | 73.31% — 2022 – 2025
**Diploma, Computer Engineering** | Gujarat Technological University | CGPA 8.89 — 2019 – 2022

## Certifications & Achievements

- AWS Certified Solutions Architect – Associate (SAA-C03) | AWS Certified Cloud Practitioner
- Microsoft Certified: Azure Fundamentals (AZ-900) | Azure AI Fundamentals (AI-900)
- Google Cloud Digital Leader
- National Cadet Corps (2019 – 2022) | Letter of Appreciation – Admiral Karambir Singh, Former Chief of Indian Naval Staff
